Anchor Danly provides die sets to the metalworking industry throughout Canada, the United States and Europe. We are proud of the fact that we supply our die sets to the Automotive, Metal Stamping, Farm Implement and Home Appliance sectors as well as Electronics and Hardware.

Anchor Die Sets constructs standard models in steel or aluminum and we welcome specials. Anchor can build die sets from 4" wide x 4" long to 120" wide x 360" long.

Steel plates are also offered through the Die Set group.

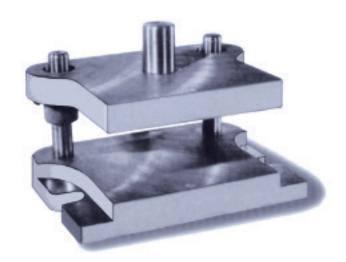

STANDARD DIE SETS

Mild Steel Plate – Stress Relieved upon Request Also available in 4140 steel and Aluminum

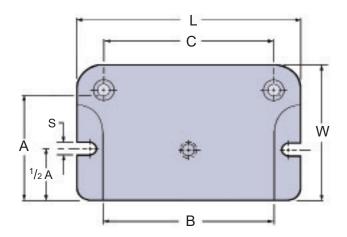

Lamina Pins & Bronze Plated Clamp Type Bushings

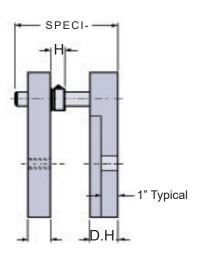

STOCKED FOR PROMPT SHIPMENT

Prices available on request – F.O.B. our Plant Sales tax extra if applicable

Ball-Bearing

OPERATING DATA & DESIGN SELECTION

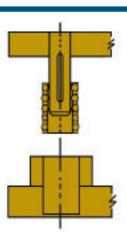

In component selection varied characteristics must be taken into consideration when selecting length of guide post, bushing and ball-bearing retainer, such as stroke, shut height and type of operation. To help in your selection we have supplied engineering data and instructions that should be used as a guide when making your component selection. The following conditions should be considered for the most effective performance in a specific application.

FULL CONTACT PRE-LOAD

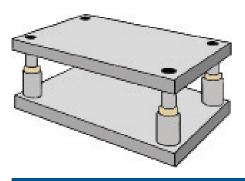

PRE-LOAD RELIEVED AT TOP OF STROKE

FULL DISENGAGEMENT

In this condition the guide post, bushing and ball-bearing retainer remain in full contact throughout the stroke cycle. This selection is beneficial and recommended for high speed, high production, short stroke dies.

This may be accomplished by selecting the guide post bushing length that allows the guide post to disengage the bushing at the beginning of the stroke or cycle. This will result in the loss of pre-load while the ball retainer is still within the bushing. This condition may be utilized with long stroke dies. It also provides safe operation by eliminating pinch points and prevents foreign materials from entering the bushing. A further benefit is it allows for re-registration of the ball retainer on each stroke. Removal of the punch holder or die holder from press is possible without total removal of dies.

This condition is permissable when the ball retainer must totally disengage the bushing on applications requiring long strokes. Safety precautions (as outlined on page 12) should always be taken when employing this method.

It should also be noted that the above illustration depicts the proper way to assemble (insert) the guide post and ball-bearing retainer into the bushing.

When in a pre-loaded (rolling press fit) condition, the ball retainer will travel half the distance of movement. In a die set application it would be half the distance of the press stroke.

BALL BEARING ASSEMBLY LUBRICATION RECOMMENDATION

In operation of ball assembly, add lubricant once each 8-hour shift by spray or brush application. Use a light-weight spindle oil like Lamina Ball Lube.

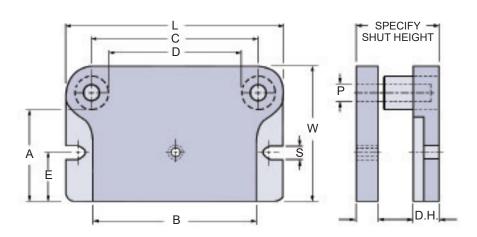

NEVER USE GREASE

STANDARD BALL-BEARING DIE SETS

Mild Steel Plate – Stress Relieved upon Request Also available in 4140 steel and Aluminum

Anchor Ball-Bearing Die Sets are made to traditionally high manufacturing requirements which have determined quality standards in the die set industry.

Lamina Components' Precision Retainer is made of heat-treated aluminum alloys with chrome alloy steel balls.

Lamina Components' Guide Posts and Bushings are manufactured to rigid standards using the highest quality steel alloys.
