Punches, Die Buttons, Pilots and Retainers

Jektol® Punches and Clearances

Jektol, DAYTON's slug ejection punch, permits doubling punch to die button clearance, produces up to three times the number of hits between sharpenings and reduces burr heights.

Retainers for Single Head Type Punches

Instead of incorporating an expensive punch retainer in the die, use an inexpensive head type retainer. They save time and money. They are designed to the same exacting standards as Dayton's True Position retainers.

Dayton Slug Control Guaranteed to Stop Slug Pulling

Dayton Slug Control is a method of reducing the risk of slugs being pulled to the die surface during withdrawal of the punch. The slugs are trapped

in the land of the die buttons until they fall freely through the relief. It has no effect on hole size and will not require any changes in your regrind practices. Dayton Slug Control is effective throughout the life of the die buttons.

This innovative process uses a series of grooves inside the die button. The slug expands into the grooves, effectively trapping it. This unique method of controlling slugs is so dependable, it's guaranteed! Test it in your die and we will offer you this unconditional guarantee: **Use Dayton Slug Control in a stamping die now pulling slugs. If for any reason you are not completely satisfied, we will refund the full cost of the Slug Control alteration.** (We cannot guarantee the retention of slugs when clearance exceeds 10% per side.)

Multiple Punch Retainers

When a cluster of holes is in an extremely tight area where single retainers will not fit, standard retainers with multiple holes are the answer. Dayton's **Multi-Location** retainers provide a simple low cost solution to multiple holes in a small area. They eliminate the need for special details, cutting both design and build time.

Urethane Strippers

Urethane strippers that fit tightly over punches might be the answer to some of the low production jobs. Urethane can eliminate the costly stripper plate and provides a benefit over the bridge stripper normally used in low budget jobs. They hold the stock flat, unlike a bridge stripper, assuring the least amount of stripping pressure and resulting wear on punches.

A new shape for Longer Life

DAYTON'S new standard shape with a constant corner radius of 0.5R puts the clearance where it's needed to prevent rapid wear and unacceptable burrs commonly generated with sharp corners. This reduces maintenance time and the risk of edge breaking during operation.

The "L" Long Life punch will reduce maintenance costs while increasing production runs by reducing corner wear.

Standard Alterations for AJ and AP Punches

Standard alterations are the ranges beyond those sizes listed above and can be manufactured for a slight additional charge. Some AP_ products are available as standard below these ranges (see AP_ chart).

*3.00 min. P at 8mm Land Length

XP, XW P or W Dimensions Larger or Smaller than Standard

XL Overall-Length Shortened
On AH_ material is removed from top. Shortens B length. Minimum overall length = 6.35

LL Precision Overall-Length
Same as XL except overall length is held to ±0.02.

XT Thinner Head than Standard
Stock removal from Head end which shortens overall length.

TT Precision Head Thickness
Same as XT except head thickness is held to ±0.01.

XSC

Slug Control eliminates slug pulling
Dayton Slug Control is as easy as specifying a catalog number. Add the information that is unique to your application to the die button catalog number. See ordering information. Available on all AD and AH die buttons.

Dayton Slug Control is Easy to Order

Dayton Slug Control is as easy as specifying a catalog number. Add the information that is unique to your application to the die button catalog number. See the example below:

You must specify **XSC** for alteration, **material thickness** and **clearance per side** as a percent.

Catalog Number

ADX 13 25 P7.0
Type D L P

Your Specs

XSC MMO.3 CS5
Alt. Mat'l Clear
Code Th'kness Per Side
(%)

This information will be entered into our computer to generate a program to alter the land of the die button and end your slug pulling problems forever! Call us or contact your Dayton distributor for more information.

Standard Key Flat Location

Standard Key Flat Location is 0°. Alternative locations of 90°, 180°, or 270° can be specified at **no additional cost**.

Custom Key Flat Location

Custom Key Flat Locations can be specified as degree required counterclockwise from 0°. **See page 24 for more details.**

XH

Reduced Head Diameter
Minimum head diameter equals
 $D + 0.00 - 0.03$

XBL

Straight Through Land
The land length (B) equals the overall length of the die button. Can be used for bushings, guides and a variety of other applications. Round only.

XAL

10° Angled Lead on AD_
The angle provides clearance for steps left by CNC machining.

Standard on AN_ Die Buttons

Standard Alterations for AN Die Buttons

XP, XW

P or W Dimensions Larger or Smaller than Standard

XL

Overall-Length Shortened
Minimum overall length = 6.35

LL

Precision Overall-Length
Same as XL except overall length is held to ±0.02.

XBL

Straight Through Land
The land length (B) equals the overall length of the die button. Can be used for bushings, guides and a variety of other applications. Round only.

XSC

Slug Control eliminates slug pulling
Dayton Slug Control is as easy as specifying a catalog number. Add the information that is unique to your application to the die button catalog number. See ordering information. Available on all AN die buttons.

Dayton Slug Control is Easy to Order

Dayton Slug Control is as easy as specifying a catalog number. Add the information that is unique to your application to the die button catalog number. See the example below:

You must specify **XSC** for alteration, **material thickness** and **clearance per side** as a percent.

Catalog Number				Your Specs		
ADX	13	25	P7.0	XSC	MM0.3	CS5
Type	D	L	P	Alt. Code	Mat'l Th'kness	Clear Per Side (%)

This information will be entered into our computer to generate a program to alter the land of the die button and end your slug pulling problems forever! Call us or contact your Dayton distributor for more information.

Jektole® Clearance

The Key to Increased Productivity

JEKTOLE® In Production

- Requires less press tonnage
- Reduces pressure required to strip the punch, reduces punch wear
- Produces minimal burr
- Doubles (and often triples) piece output per grind
- Reduces total punch costs

JEKTOLE® In Maintenance

- Keeper Key—holds pin in retracted position
- Eliminates the need for disassembly before grinding
- Maintains proper pin extension
- Reduces downtime for regrounding

XS22
Double Shear

XS23
Single Shear

XS24
Single Shear
Angle with Flat

Shear Angles can be applied to all punch points. These angles are used primarily to reduce slug pulling. Single and Double Shears can be used to reduce the punching force as well as minimize slug pulling. These alterations are pre-priced and do not add to the standard delivery of the product.

Shear Angles are also available on Classified Shapes, but are available as special order only.

For your reference standard head flat and dowel locations are at 0°.

Simply add the alteration code shown next to the drawings, and the angle desired, to your punch catalog number. Tolerance on all angles is ± 15 minutes.

LL not available on XS19, XS21, XS22, and XS23.

Change Retainers

Air Cylinder Type — For Headed Punches

Engage or disengage punches in seconds

Change retainers are used where different hole patterns are required. Various hole patterns can be accomplished without the need for multiple dies. Different parts, such as right and left hand can be run in one die.

Changing hole patterns takes only minutes, sometimes only seconds. A bar holding the punch in position is released to allow the punch to retract up far enough to avoid contact with the material.

Punches

**RETAINER
INCLUDES:**

- 2 Tapped dowels
- 2 Screws

Don't waste time and money building a retainer for just one punch. TRUE LOCATION Retainers offer precise dowel locations allowing CNC machining of the punch and die plates. The dimensional accuracy also permits interchangeability of retainers that before could not have been done without plugging holes and re-machining for dowels.

Use Dayton's Center Dowel Punches and Pilots for the best accuracy. With the dowel located directly over the center-line of the

punch, accumulation of tolerances is eliminated. This provides the best possible alignment. In addition, only one dowel is needed for a round punch, a shaped punch requires a second dowel for radial location. An additional dowel hole is provided for use with die buttons.

- Ground top and bottom
- Case-Hardened to approximately Rc 42

Multi-Location Retainers

Multiple Head Type Punch Retainers

Dayton's innovative Multi-Location retainers provide a simple, low-cost solution to building new dies. These retainers reduce the need for special detailing, saving both design and build time.

Multi-Location retainers are easy to order. Simply specify type, thickness, width and length. (For more information, see How to Order example on the next page.) Order forms are available on request.

Locking Devices

Single Flats for Locating Punch Head

Standard key flat locking device is located at 0°. Specify **X2** as shown on the order form example shown below.

Alternate locations of 90°, 180° or 270° may be specified at no additional cost. Specify **X2** and the angle required.

Example: **X2 90°**

Custom Location

Custom key flat locking device can be located at any angle. Specify **X5** and the angle required counterclockwise from 0°.

Example: **X5 135°**

Standard Location

Custom Location

Flat Tolerances

FLAT	
F	RADIAL
+0.025	0.03/
-0	25.0

Alterations

Standard Jackscrew Hole

Jackscrews make it easier to pull retainer off the dowels.

Special Size

For a custom size, we can remove any amount of material from the side(s) of the retainer. Edges are sawcut (± 0.8).

Clearance Holes

Clearance holes or tapped holes can either be detailed or specified on the order as in the How to Order example shown below.

Holes are drilled through the retainer unless otherwise specified.

Location	± 0.3
Diameter	+0.4 -0

The following alterations require detail drawings

Notches

Saw cut notches (± 0.8) can be cut into any retainer side to clear other tooling.

Angles

Saw cut angles (± 0.8) can be specified to clear other tooling.

How To Order:

Urethane Strippers

Strip-Shape Urethane Strippers assure positive stripping and they guard against punch failure by dampening punch vibration by gripping the punch point. The closed end design holds thin stock flat during the stripping cycle, reducing the potential of rejected parts.

Made from specially formulated urethane resins, these rugged strippers are guaranteed to meet your need for clean, fast precise stripping action—with all types of punches. Because of Dayton's unique curing agent, Strip-Shape urethane provides greater load bearing capacity than ordinary urethanes. Lot-to-lot pressure ratings are also much more consistent.

How to Order:

Qty. Catalog No.
12 UHM-16-63
12 748595

Set consists of: Backing Plate, Retaining Plate and M8 x 20 Socket Head Cap Screw.

UBP, URP and UHM conform to **NAAMS™** standard for Urethane Strippers and Backing/Retaining Plate Set.

Classified Shapes

Orientation & Locking

The Locking Device orientation is standard at 0°.

X2 Standard Location:

Standard location of key flat is at 0°. Alternate locations of 90°, 180° or 270° can be specified at no extra cost.

X5 Custom Location:

Custom Location of key flat can be specified as X5 and degrees from 0°.

Views

Views are: reflected view of punch and plan view of die button.

Corner Dimensions

Dimensions should be to the theoretical sharp corners for C22, C24, C25, C34, C61 and C88. Some reduction of these dimensions will result from fitting the punch and die button under conditions where clearance is 0.04 or less per side.

Fillets matched with sharp corners reduces the clearance per side (Δ). If the clearance is 0.04 Δ or less, DAYTON will break sharp corners when the punches and die buttons are ordered together. This reduces assembly time and the risk of the edge breaking during operation. All back-holes are counterbored.

Shape centers

Shapes are centered on punch shanks as shown. Shapes in die buttons are also centered as shown with the exception of shapes **C22** and **C34**. Due to the clearance, the P dimension on these shapes will not be centered.

How to Order:

Specify: Quantity
Catalog Number

Code
Point or Hole Dimensions

10 APC 10 19 90 C13 P9.5, W8.8 A2.8 X43

Example: Die Buttons

10 ADC 20 30 C13 P9.5 W8.8 A2.8 $\Delta 0.1$ X43

Clearance

To assure proper relationship with punches, it is necessary to specify punch dimensions and clearance per side (Δ) when ordering die buttons.

DAYTON will assure the proper clearance of die buttons to the punch when ordered in this manner.

Notes ① and ② — Fillets and Sharp Corners

Normal Grinding methods produce:

- ① 0.2 max fillet on the punch...matching corner sharp on the die button.
- ② 0.2 max fillet on the die button...matching corner sharp on the punch.

Locking Devices

How to Order:

5 ADO 40 30 P16, W6.4, X2
9 ADR 100 35 P75, W50, X83

Single and Double Flats

Headless Die Buttons: X20, X80, X50, X90

Body Ø ▶	08	10	13	16	20
F	3.5	4.0	5.5	7.0	8.5
Body Ø ▶	22	25	32	38	40
F	9.5	11.0	14.0	17.0	18.0
Body Ø ▶	45	50	56	63	71
F	20.5	23.0	26.0	29.5	33.5
Body Ø ▶	76	85	90	100	
F	35.5	40.0	42.5	47.5	

Additional Flats

Note: depth of flat is taken from shank, not the head on punches.

Standard/Alternate Locations

Definitions:

Standard Location is at 0°.

Alternate Location is 90°, 180° or 270°. Alternate Locations are available at no additional charge.

Custom Locations

Definition:

Custom Location is *any angle other than*: 0°, 90°, 180° or 270°.

Single Flats: X2, X20, X80

Locking Devices	Punch	Die Button
X2	Top	Bottom
X20	N/A	Bottom
X80		Top

Order Example:

X2 - 90°

Double Flats: X3

Locking Devices	Punches
X3	Top

Order Example:

X3 - 90°

Second Flat is *always parallel* to the first flat.

Single Flats: X5, X50, X90

Locking Devices	Punch	Die Button
X5	Top	Bottom
X50	N/A	Bottom
X90		Top

Order Example:

X5 - 135°

Double Flats: X6

Locking Devices	Punches
X6	Top

Order Example:

X6 - 135°

Additional Flats

Code	Depth	Length
X81	1.5	13
X82	1.5	16
X83	1.5	20
X84	1.5	Full Length
X85	2.5	13
X86	2.5	16
X87	2.5	20
X88	2.5	Full Length
X89	Specify Dimensions	

Additional Flats

Code	Depth	Length
X91	1.5	13
X92	1.5	16
X93	1.5	20
X94	1.5	Full Length
X95	2.5	13
X96	2.5	16
X97	2.5	20
X98	2.5	Full Length

Dowel Slots

Dowel Slots: X0*, X4, X41 & X43

Locking Devices	Dowel Ø
X0*	3
X4	3
X41	4
X43	6

Order Example:

X0 - 180°

Dowel Slots: X1*, X7, X71 & X73

Locking Devices	Dowel Ø
X1*	3
X7	3
X71	4
X73	6

Order Example:

X71 - 135°

Dowel Slot F Dimension for Headless Die Buttons Only

Body Ø ▶	08	10	13	16-25	32-100
X0/X1	F	.5D	.5D	.5D	.5D
X4/X7		4.7	5.5	6.7	.5D
X41/X71		5.2	6.0	7.2	.5D
X43/X73		6.2	7.0	8.2	.5D+1.0

Key Flats vs. Dowel Slots

Maximum hole dimensions in die buttons were designed with key flats in mind. There are instances where, if using a dowel slot, the dowel hole could break into the relief. For this reason there are two ways to specify the location of the dowel. **X0** (standard/alternate location) and **X1**

(custom location) are located .5D from centerline. However, when hole dimensions are approaching the high limit of "P" **X4** (standard/alternate location) or **X7** (custom location) may be specified. This relocates the dowel outward to assure no interference between the dowel and relief.

To determine if you will have an interference problem see Die Button Construction on pages 10 and 11.

*Available on headless die buttons only

Surface Treatments and Coatings

Some catalog products can be coated to increase hardness, reduce galling, and improve wear and/or corrosion resistance. These coatings and treatments are available for M2 and PS4 material.

Surface Treatments

DayKool™ (XCR)—A cryogenic steel conditioning process used in addition to heat treating. An effective way to achieve optimum toughness, improved strength, and dimensional stability. Used primarily with hard, thick materials.

DayTride® (XN)—A low temperature, cost-effective surface application that treats all exposed surfaces. Provides increased dimensional stability. Ideal for punches and die buttons. Approx. hardness: RC65-73.

XVP—A thin film coating provides superior hardness (harder than carbide). Super-smooth finish on the point helps reduce galling and maintenance. Ideal for higher-than-normal punching frequency.

XPS—Super-smooth polish on the point to reduce galling and improve punch life. Use with the appropriate coating for your application to maximize punch life and reduce maintenance costs. Excellent for extruding applications.

Abrasive Wear

DayTiN® (XNT)—Excellent wear resistance and lubricity. Not recommended for stainless steel, copper, or nickel. A good general-purpose coating. Approx. hardness: *Vickers 2300.

TiCN (XCN)—Ultra-hard (harder than carbide), thin coating. Provides superior abrasive wear resistance and lubricity. A very good general-purpose coating for all materials. Upgrade over XNT. Approx. hardness: *Vickers 3000.

DayTAN™ (XAN)—Ultra-hard (harder than carbide), high-aluminum coating. Provides high temperature resistance. Well-suited for applications where surface heat is generated. Ideal for HSLA, dual phase, and TRIP steels. Upgrade over XCN. Approx. hardness: *Vickers 3400.

ZertonPlus™ (XNA)—Superior hardness (harder than carbide); provides superior abrasive wear resistance and excellent lubricity. Provides highest temperature resistance, thermal shock stability, & hot hardness. Approx. hardness: *Vickers 3200.

Adhesive Wear

XNM—A solid lubricant coating. Provides both lubricity and wear resistance not available from other PVD or CVD processes. Ideal for aluminum, copper, pre-painted, and galvanized steels. Approx. hardness: *Vickers 2000.

XCD—Diamond-like carbon coating. Combines high hardness with an extremely low coefficient of friction. Good protection against abrasive and adhesive wear. Ideal for aluminum. Approx. hardness: *Vickers 5000.

XCDH—Super-smooth finish combined with advanced DLC coating for a very low coefficient of friction with extremely high wear resistance. Approx. hardness: *Vickers 5000.

XCDP—Super-smooth finish combined with a DLC coating for a very low coefficient of friction with high wear resistance. Excellent for stamping aluminum. Approx. Hardness: Vickers 2800.

Extrusion Coatings

XNP—The ultimate coating for improved resistance to galling; excellent wear resistance, superior surface finish, and high lubricity. Ideal for extruding and forming applications. Tolerance is ± 0.005 mm. Approx. hardness: *Vickers 3100.

XNAProgress (XNAP)—Ultra-hard coating that absorbs shear stress; provides excellent high-temperature resistance. Ideal for stamping where tools are exposed to extreme stress profiles. A good alternative to TD coating without the dimensional changes associated with that process. Approx hardness: *Vickers 3200.

Miscellaneous Coating

CRN—Excellent adhesion, high toughness, and good corrosion resistance. Primary applications are metal forming (copper, brass, & bronze), metal die casting, and plastic injection molding. Approx. hardness: *Vickers 1800-2100.

* Vickers used when RC exceeds 80.

Commitment to Quality & Customer Satisfaction

Dayton Lamina is a leading manufacturer of tool, die and mold components for the metal-working and plastics industries. As a customer-focused, world-class supplier of choice, we provide the brands, product breadth, distribution network and technical support for all your metal forming needs.

Our goal is to give our customers the most innovative and value-added products and services.

DAYTON LaminaTM

a MISUMI Group Company
