General Information

Hyson, headquartered in Brecksville, Ohio, is a world class engineering and manufacturing company that provides high-quality, safety-engineered force control solutions for a wide range of applications and industries, including automotive, aerospace, appliance, medical and HVAC. Hyson partners with our customers to understand applications and provide the best solutions for each one. We are a full service force control provider for critical machine, vehicle and precision metal processing applications, meaning we can supply dependent upon each customer's needs, including: gas springs, cam systems, cushions, manifolds and knockout systems.

Our success lies with our commitment to continually improve ourselves, our processes and our products to ensure we meet or exceed our customers' expectations. Our ISO-9001, AS-9000 and PED certifications attest to our ongoing commitment to the highest standards of quality.

PED – Pressure Equipment Directive

Hyson gas springs are designed to meet customer expectations for reliability, safety and service lifetime. The design, manufacture and testing of Hyson gas springs has been approved according to the European Pressure Equipment Directive (97/23/EC).

The Pressure Equipment Directive (PED) replaces all previous European legislation governing the design, manufacture and testing of pressure vessels.

Product Value

Cam units are ideal for delivering force to pierce, flange, form or trim. Cams are available in the mechanical Roller Cam or the hydraulic Nitro-Cam®. Compact cam units prevent damage to die components in the event an obstruction blocks the cam from its full travel, and resets without assistance.

Compact units can be coupled together, allowing for multiple operations within the same tool, performed simultaneously, and often provide the ability to produce a part with fewer tools.

The **Nitro-Cam®** system can be easily mounted in a die at virtually any angle or position, providing the greatest flexibility. The Nitro-Cam® units come equipped with a built-in safety overload protection.

The **Roller Cam** system utilizes a roller bearing for reduced wear and long life.

Advanced Safety Features

Overload Protection: In the case of blockage in the tool that causes excessive piston return speed, a specially-designed rod and integral safety stops retain the piston rod in the gas spring and allow gas to vent safely.

Advanced Safety Features

Overload Protection

FULLY ADJUSTABLE HYDRAULIC CAM FORCE

Product Features

- Available in five forces: 15,000 N/1.69 ton; 40,000 N/4.50 ton; 60,000 N/6.74 ton; 90,000 N/10.12 ton and 150,000 N/16.86 ton.
- Three standard stroke lengths: 24 mm/.94 in; 49 mm/1.93 in and 99 mm/3.90 in*.
- Sensor kits are available for positioning verification.
- Can be mounted at any angle in the die.
- Power unit, containing power cylinder and accumulator, can be positioned remotely from cam (up to a distance of 2m/6.5 ft).
- Power cylinder is driven by actuator on ram.
- No bulky mechanical drivers.
- Constant force through stroke.
- Built-in mechanical stop for exact cam stroke.
- No fluid pressure at die open.
- Reduce side load in tool.
- Retrofittable to existing dies.
- For piercing applications, one power unit can drive three cam units.
- Controllable return force (up to 20% of piercing force).
- Accumulator prevents over-pressurization of system if blockage occurs in cam.

Selection and Installation Guidelines

- Power cylinder stroke is normally 10 mm/.39 in longer than the cam stroke. The actual power cylinder stroke must be designed into application.
- When connecting three cams to one power unit, the power unit must be sized accordingly. Contact Hyson Products for application support.
- When piercing forces are close to maximum catalog ratings, choose the next larger size cam.
- Secured into position with key and two dowel pins, and bolted to the tool.
- Retainer mounting surface allows easy machining of mounting and dowel holes.
- For complete filling and draining instructions or for service, contact Hyson.

* Stroke length not available on Cam Unit HCCU-15.

MECHANICAL ROLLER FORCE

RCP2-150

RC2-30 & RC2-50

RC2-30, RC2-50 & RCP2-150

DESIGN

Product Features

- Available in three piercing forces: RC2-30 offers 30kN/3.37 ton; RC2-50 offers 50kN/5.62 ton and RCP2-150 offers 150 kN/16.86 ton.
- Engineered for a minimum service life of one million cycles.
- Precision guiding allows more off-center loading and upside-down installation.
- Built-in return stroke dampening.
- Simple punch attachment.
- Maintenance-free operation.
- Heavy duty roller bearing transfers force from driver to cam.
- All models feature HYSON nitrogen gas springs for return force.

Selection and Installation Guidelines

- When required forces are close to maximum catalog ratings, choose the next larger size cam.
- Secured into position with key and two dowel pins, and bolted to the tool.
- Retainer mounting surface allows easy machining of mounting and dowel holes.
